

Synthetic Monitoring Setup Checklist

The journeys, probes, and coverage to stand up first.

Critical journeys to cover

- ■ Login / authentication flow
- ■ Search → product / content detail
- ■ Add to cart → checkout → payment
- ■ Account / onboarding flow
- ■ Key partner or B2B integration flow

API checks

- ■ Health & status endpoints (200, latency)
- ■ Auth endpoint returns valid token < 300ms
- ■ Critical read & write endpoints (schema + content)
- ■ Third-party dependency endpoints

Probe coverage

- ■ Probes in each region you serve (US, EU, APAC...)
- ■ At least one probe per critical data center
- ■ Mobile + desktop browser profiles where relevant

Alerting & SLAs

- ■ Dynamic baselines configured per journey

- ■ Multi-location confirmation before paging (reduce noise)
- ■ SLO burn-rate alerts enabled
- ■ SLA report scheduled for stakeholders

Operationalize

- ■ Each alert links to a runbook
- ■ High-confidence runbooks promoted to auto-remediation
- ■ Recovery validated synthetically before close
